# Adding a Note to a Folder

Something special you can do with folders is add a note to them. You can keep notes about anything, such as where you placed a file, what tasks you still need to take care of, and more!

To create a folder note, navigate to the folder where you want to create a note, and click on the empty white space that says `Add notes, lists or links...`.

When you create a note, a file called "Readme.md" will be created. This is where your note will be stored. If you delete "Readme.md", your note for that folder will be deleted with it.
